

# Azure Arc

# Microsoft Azure

## Single control plane with Azure Arc

### Infrastructure

Connect and operate hybrid resources as native Azure resources

**Azure Arc-enabled infrastructure**

### Services

Deploy and run Azure services outside of Azure while still operating it from Azure

**Azure Arc-enabled services**

Arc Server

K8s

Windows

SQL Server

SQL DB

PostgreSQL

Web Apps

Functions

Logic Apps

Machine Learning

Multi-cloud

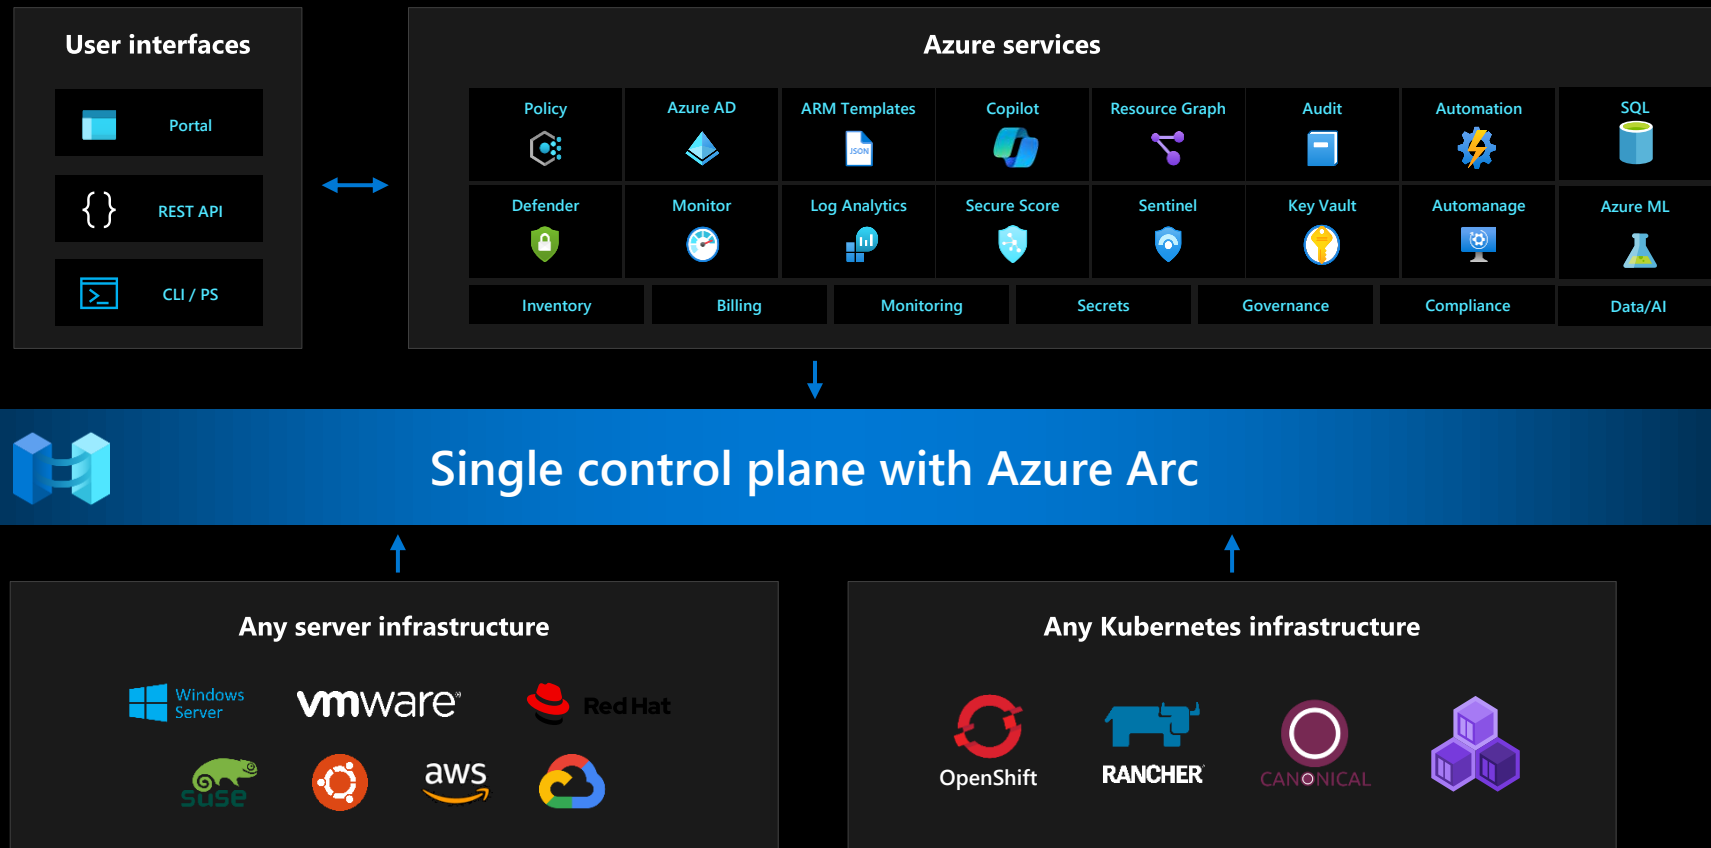

Datacenter

Edge

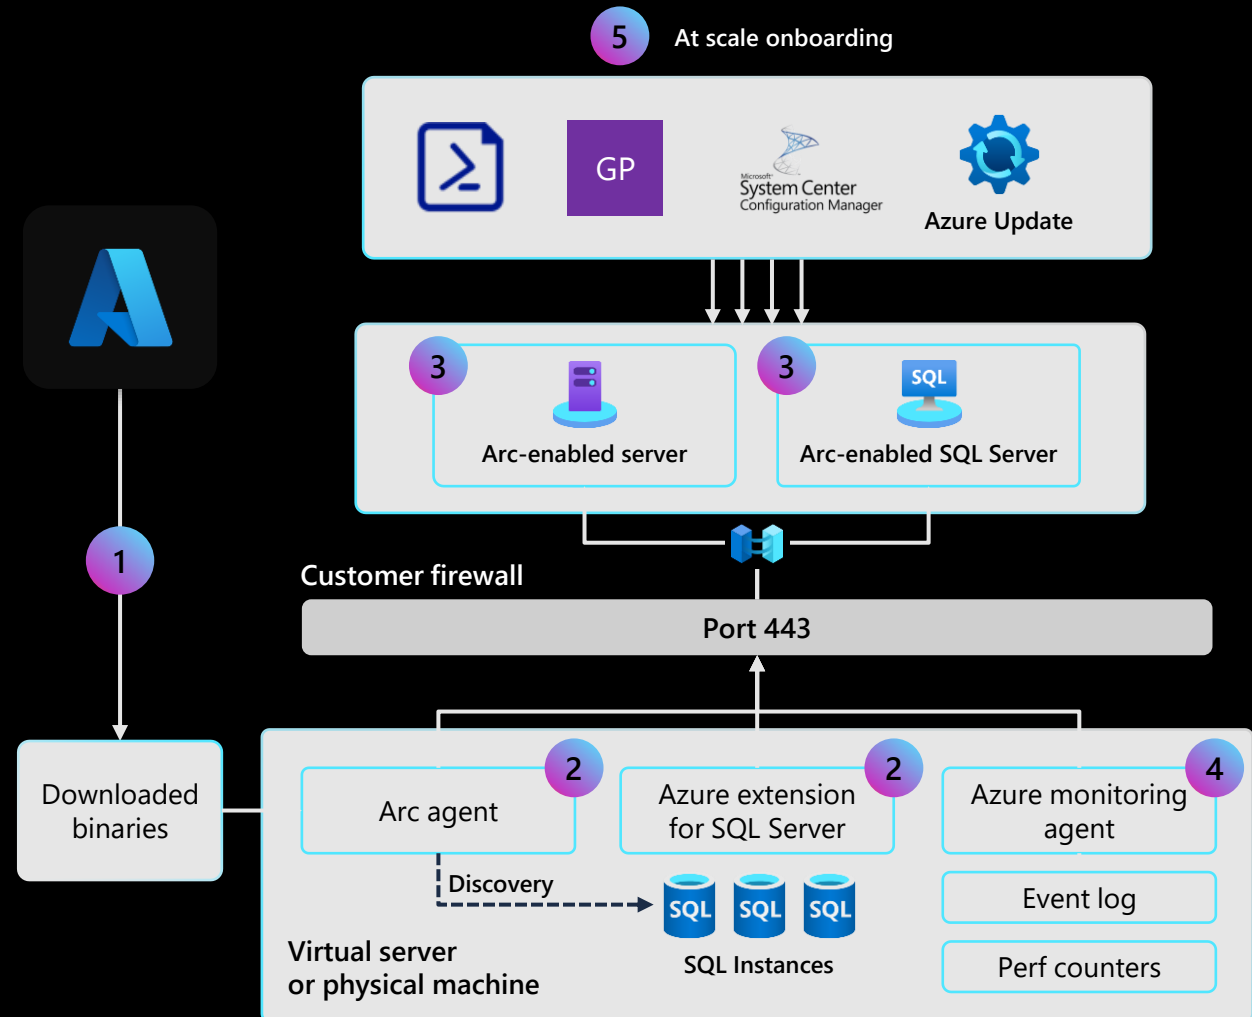

# Azure Arc: extends Azure management & security to any infrastructure

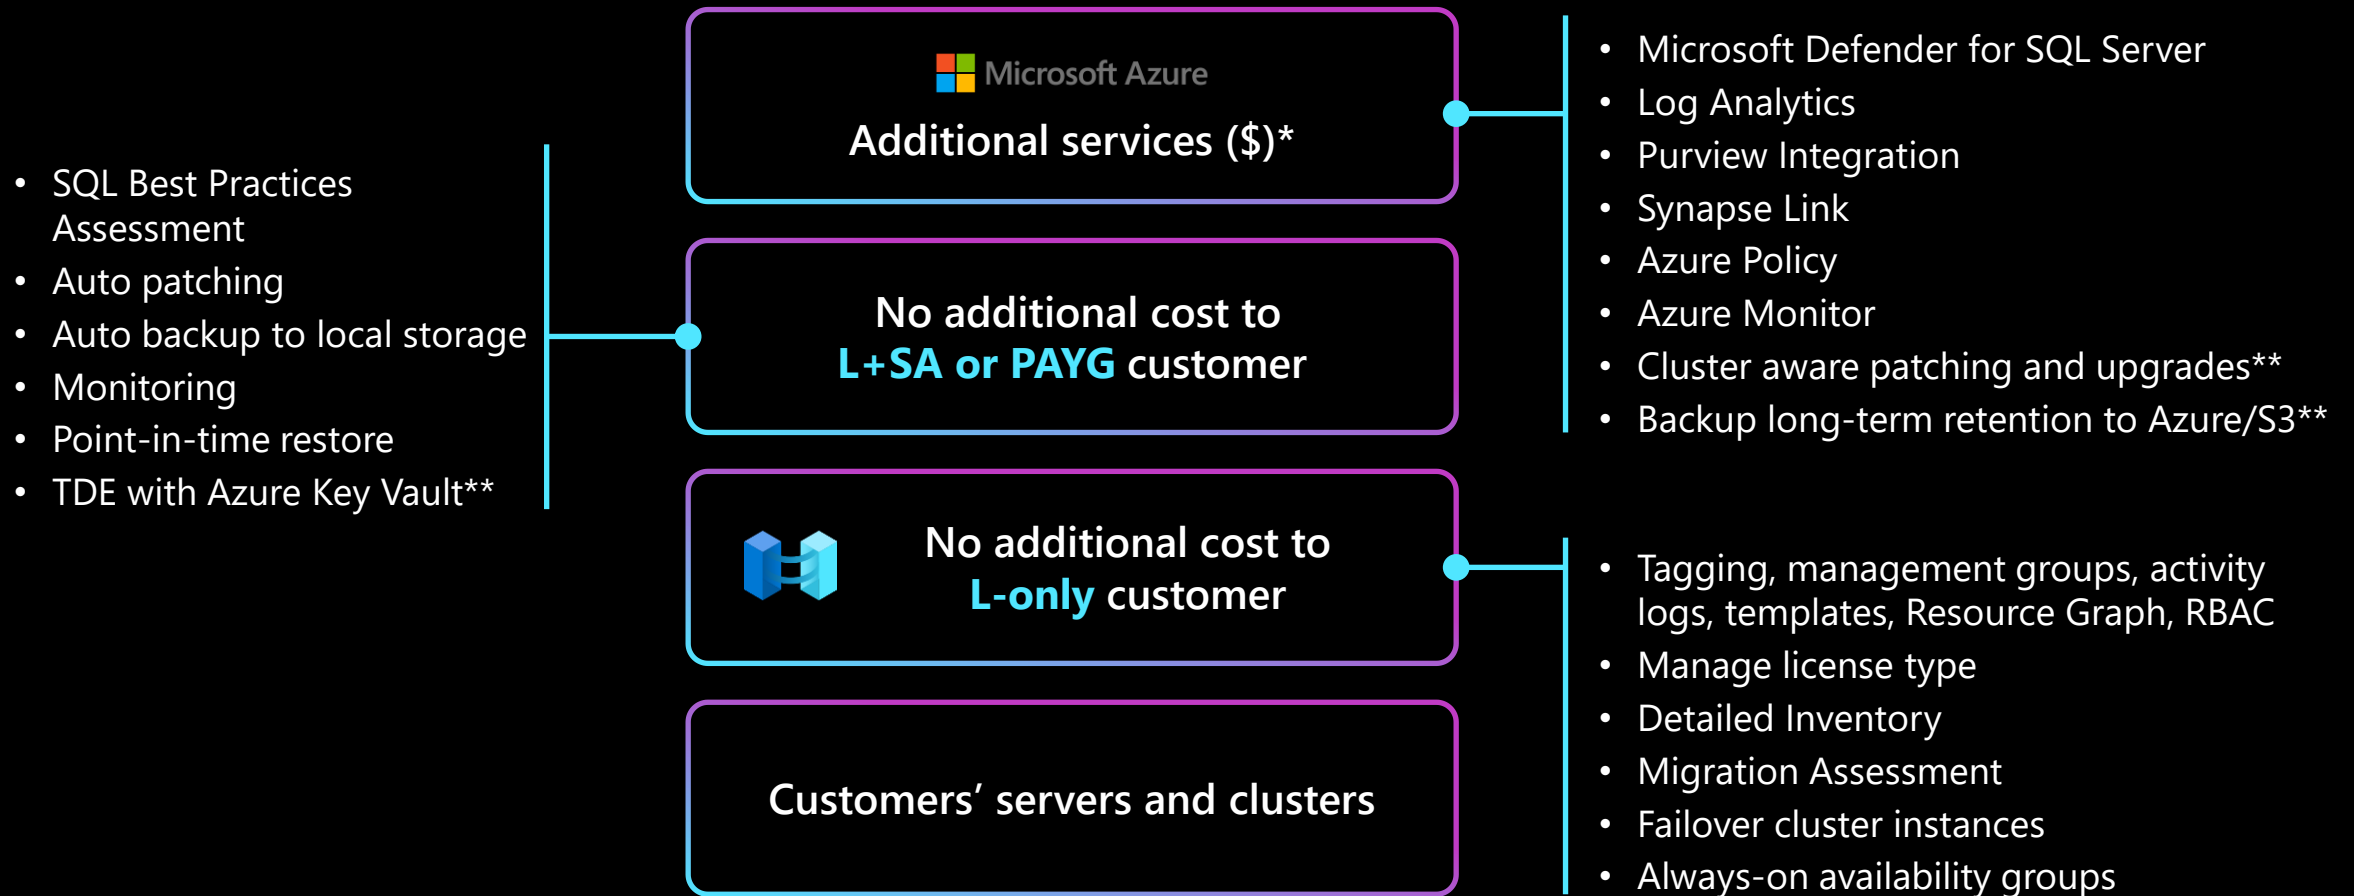

Manage your private, public and edge environment in a consistent way

# SQL Server enabled by Azure Arc architecture

- 1 Generate script and execute on Server
- 2 Local services created
- 3 Arc-enabled server and Arc-enabled SQL Server resources created
- 4 Azure monitoring agent
- 5 Onboard at scale

# SQL Server enabled by Azure Arc pricing model

\*Pricing for Azure Arc-enabled services and additional management services is consistent with Azure pricing.

\*\* Not available today. On the product roadmap

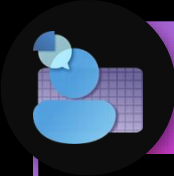

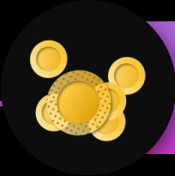

# Enabled features by license type

 Not supported     Supported     Future support

Built-in capabilities	License Only	License with Software Assurance or SQL subscription	Pay-as-you-go
Connect to Azure	 Included	 Included	 Included
SQL Server inventory	 Included	 Included	 Included
Detailed database inventory		 Included	 Included
Azure AD auth		 Included	 Included
Best practices assessment		 Included*	 Included*
Auto patching		 Included	 Included
Auto backup		 Included	 Included
Monitoring		 Included	 Included
TDE with Azure Key Vault		 Included	 Included
Defender for SQL Server	 Additional Cost	 Additional Cost	 Additional Cost
Purview premium	 Additional Cost	 Additional Cost	 Additional Cost
HA/DR inventory management		 Additional Cost	 Additional Cost
License compliance management		 Additional Cost	 Additional Cost
Cluster aware patching and upgrades		 Additional Cost	 Additional Cost
Point-in-time restore		 Additional Cost	 Additional Cost
Backup long-term retention to Azure and S3		 Additional Cost	 Additional Cost

\*Might incur additional charge on Log Analytics Workspace. Detailed example included in the next slide.

# Pricing example

	 Customer inputs	 Pricing	 Cost calculation
Log Analytics Workspace	Run Best Practice Assessment once a month for <b>100</b> instances <b>3.5MB</b> per run per instance	<b>\$2.76</b> per GB per month First <b>5GB</b> per month is free	<b>100 × 3.5MB × \$2.76/GB = \$0.97</b> per month
Defender for SQL Server	<b>100</b> instances	<b>\$15</b> per instance/month	<b>\$1500</b> per month
Purview Integration	Put all <b>100</b> instances into the same resource group	DevOps policies <b>\$2</b> per month	DevOps = <b>\$2</b> per month
			Total: <b>\$1502.97</b>

# How to onboard SQL Server to Azure Arc

## Range of different onboarding tools

### **SQL Server 2022 setup**

Integrated UI to connect to Azure Arc during installation

### **Automatic registration via Azure policy**

One-click action applies to all servers already connected to Azure Arc

### **Onboarding individual SQL Servers from Azure portal**

Run auto-generated script from the target machine

### **Tenant scope auto-registration**

Work with your account team on a consent email to allow Microsoft devops do it for you

### **Future – Auto-registration during the hosting server onboarding**

SQL Server configuration included into the default auto-manage profile

# How to select license type for SQL Server

## Customer control over cost optimization

### Pay-As-You-Go

- Triggers Pay-As-You-Go hourly billing after SQL Server is connected
- Enables core Arc features

### Software assurance or SQL Subscription

- Provides license usage visibility in Cost management + Billing via distinct \$0 meters
- Enabled core features

### License only

- Provide license usage visibility in Cost management + Billing via distinct \$meters
- Disables core features

### Can alter the selection at any time

Use Azure portal or script to change between license types  
Takes effect the next hour

Home > Azure Arc | SQL Servers > Add existing SQL Server instances >

### Connect Azure Arc-enabled SQL Server

Microsoft

Prerequisites **Server details** Tags Run script

Azure Arc-enabled SQL Server allows you to centrally apply policies and run assessments against existing SQL Server instances running on either connected machines or via indirect connections on-premises.  
[Terms of use](#) | [Privacy policy](#)

**Project details**

Select the subscription to manage deployed resources and costs. Use resource groups like folders to organize and manage all your resources.

Subscription \*

Resource group \*

**Server details**

Designate an Azure region where machine metadata will be stored.

Region \*

Operating system \*

**Proxy server**

If your environment requires a proxy server to connect to the internet, please specify the proxy server information below.

Proxy server URL

**SQL Server management details**

Specify the SQL Server edition and license type you are using on this machine. [Learn more](#)

License type \* ☐ **PAYG** - Standard or Enterprise edition with pay-as-you-go billing through Microsoft Azure  
☐ **Paid** - Standard or Enterprise edition license with Software Assurance or SQL Subscription  
☐ **LicenseOnly** - Developer, Evaluation, Express, Web, Standard or Enterprise edition license only without Software Assurance

By default, all SQL Server instances on the server will be registered. To exclude SQL Server instances from registration, enter the instance names separated by space.

Excluded SQL Server instance names

# New cloud billing model for SQL Server (Pay As You Go\*)

Better cost efficiency when paying only for what you use

SQL Server pay-as-you-go  
licensing enabled by Azure Arc  
(per core per month/hour)

Pricing	Monthly rate	Hourly rate
Standard Edition	\$73	\$0.100
Enterprise Edition	\$274	\$0.375

Available on SQL Server 2014, 2016, 2017, 2019, and 2022

\* Traditional Licensing Options are still available. More [here](#).

- ✓ **Optimize asset capitalization**
  - Organizations that focus on EBITDA and capitalized expenses prefer to purchase their licenses. Customers that bill on a cost-plus or other expense-based chargeback model will prefer the Pay-As-You-Go model.
- ✓ **Optimize upfront costs**
  - Pay-As-You-Go doesn't have any upfront costs and is billed monthly but in the long term it may have a higher TCO
- ✓ **Optimize for periodic consumption**
  - Reduced IP cost of periodic workloads such as of ERP, payroll, giving campaigns and others
  - Scale down the entire VM or stop SQL Server instance

# Extended security updates enabled by Azure Arc

## Flexible billing and savings

Monthly billing model centralized in Azure to run end-of-support operating systems

## Visibility and reliability

Ensure consistent Windows Server 2012/R2 and SQL Server 2012 performance with high availability and visibility over your entire data and server estate

## Security and compliance

Seamlessly extend Azure security and governance to your environment and stay compliant with supported software

# SQL Server EOS/ESU Flow

[Azure Arc] ensured our entire SQL estate, on-premises & multicloud, were meticulously prepared for migration to Azure, guaranteeing a smoother and highly successful migration experience.

—Chandra Kala Macha, Information Officer II, World Bank

## SITUATION

Sprawling IT operations across 130+ locations

Various IT teams using multiple cloud providers and tools to manage the complex backend

Difficult and time-consuming to monitor and secure on-premises SQL Server given the fact multiple teams need to be aligned and coordinated

## SOLUTION

**Consolidate:** World Bank adopted [Azure Arc](#) to address multiple issues including [inventory management](#) of their SQL estate, streamlining maintenance tasks such as [backups](#) and [patching, best practices assessment](#), and gaining insights on migration readiness

**Unify:** World Bank wanted a solution that could be used to manage both Azure and AWS servers, but that would also work with its Microsoft SQL Server stack

**Expand:** The Information Security Office at World Bank uses [Defender for Cloud](#), [Microsoft Purview](#). With Azure Arc, they extended those services to entire SQL estate, on-premises and across multicloud

## IMPACT

**90% cost saving** from consolidating tools for monitoring, security and compliance

**Streamline cloud migration** journey using Azure Arc

Significantly **reduced security risks and non-compliance** at the levels of both compute resources and data workloads

# Azure Arc-enabled Servers pricing

Azure Arc is free to install. Basic management services like inventory, tagging, server organization, RBAC, and querying with Azure Resource Graph are free. Paid services are:

**Microsoft Defender for Cloud** **\$5/server/month (Plan 1) or \$15/server/month (Plan 2)**

Free for the first 30 days, with 500MB/server included data. \$0.02/server/hr.

**Azure Monitor** **\$2.30/GB [pay-as-you-go]**

Billed for log analytics, tests, metrics, alerts, and notifications. 5GB per billing account/month is included

**Microsoft Sentinel** **\$2/GB-ingested [pay-as-you-go]**

Billed for volume of data ingested for analysis in Microsoft Sentinel, stored in the Azure Monitor Log Analytics workspace

**Azure Update Manager** **\$5/server/month [pay-as-you-go]**

Charged at a daily prorated value of \$0.16/server/day. Only charged for days when Arc servers are connected and managed

**Azure Policy Guest Configuration** **\$6/server/month**

Policies assigned by Defender for Cloud, of any other category, or on Azure Stack HCI resources are exempt
